CALIBRATION

Valid To: March 31, 2026

Certificate Number: 1400.01

In recognition of the successful completion of the A2LA evaluation process, accreditation is granted to the laboratory location listed above and as well as the one satellite location listed below^{1, 11, 12}:

- ¹ This laboratory offers commercial and field calibration service.
- ² Calibration and Measurement Capability Uncertainty (CMC) is the smallest uncertainty of measurement that a laboratory can achieve within its scope of accreditation when performing more or less routine calibrations of nearly ideal measurement standards or nearly ideal measuring equipment. CMCs represent expanded uncertainties expressed at approximately the 95 % level of confidence, usually using a coverage factor of $k = 2$. The actual measurement uncertainty of a specific calibration performed by the laboratory may be greater than the CMC due to the behavior of the customer's device and to influences from the circumstances of the specific calibration.
- ³ Field calibration service is available for this calibration. Please note the actual measurement uncertainties achievable on a customer's site can normally be expected to be larger than the CMC found on the A2LA Scope. Allowance must be made for aspects such as the environment at the place of calibration and for other possible adverse effects such as those caused by transportation of the calibration equipment. The usual allowance for the actual uncertainty introduced by the item being calibrated, (e.g. resolution) must also be considered and this, on its own, could result in the actual measurement uncertainty achievable on a customer's site being larger than the CMC.
- ⁴ In the statement of CMC, L is the numerical value of the nominal length of the device measured in millimeters.
- ⁵ The CMC for liquid-in-glass thermometers is based on a 0.1°C graduation. All thermometers with greater than 0.1°C graduation will have a larger CMC.
- ⁶ In the statement of CMC, percentages are to be read as percent of reading unless otherwise noted.
- ⁷ In the statement of CMC, FS is equal to full scale.
- ⁸ The contributions from the "best existing device" are not included in the CMC claim.
- ⁹ In the statement of CMC, the symbol Γ represents a measured reflection coefficient; RF power does not include mismatch uncertainty.
- ¹⁰ This laboratory meets R205 – Specific Requirements: Calibration Laboratory Accreditation Program for the types of dimensional calibrations listed above and is considered equivalent to that of a calibration.
- ¹¹ This accreditation covers calibrations performed at the main laboratory and the following satellite laboratory listed above.
- ¹² This scope meets A2LA's *P112 Flexible Scope Policy*.
- ¹³ The stated measured values are determined using the indicated instrument (see Comments). This capability is suitable for the calibration of the devices intended to measure or generate the measured value in the ranges indicated. CMC's are expressed as either a specific value that covers the full range or as a percent or fraction of the reading plus a fixed floor specification.
- ¹⁴ The type of instrument or material being calibrated is defined by the parameter. This indicates the laboratory is capable of calibrating instruments that measure or generate the values in the ranges indicated for the listed measurement parameter.

Accredited Laboratory

A2LA has accredited

JAPAN QUALITY ASSURANCE ORGANIZATION

Tokyo, JAPAN

for technical competence in the field of

Calibration

This laboratory is accredited in accordance with the recognized International Standard ISO/IEC 17025:2017 *General requirements for the competence of testing and calibration laboratories*. This laboratory also meets R205 – Specific Requirements: Calibration Laboratory Accreditation Program. This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality management system (refer to joint ISO-ILAC-IAF Communiqué dated April 2017).

Presented this 22nd day of March 2024.

A blue ink signature of Mr. Trace McInturff.
