CALIBRATION

Valid To: April 30, 2024

Certificate Number: 2166.01

In recognition of the successful completion of the A2LA evaluation process, accreditation is granted to this laboratory to perform the following calibrations^{1, 10}:

I. Electrical – DC/Low Frequency

(Table 1 of 2) DC Voltage			
Parameter/Equipment	Range	(±) CMC ^{2, 4, 5, 13}	Comments
DC Voltage Generate (Fixed Points)	± 100 mV	3.0 µV/V	Calibration of reference multimeters w/ Fluke 5720/5725A characterized calibrator For long scale DMM calibrations

Parameter	Range	(\pm) CMC ^{2, 11}	Comments
Frequency Generate and Measure	(1, 5, 10) MHz	0.9 parts in 10^{12} Hz/Hz	GPS through FMAS system from NIST and HP5071 & Fluke 910R
Frequency Generate	1 mHz to 10 MHz	1.0 parts in 10^{10} Hz/Hz + 1 μ Hz	GPS based 10 MHz distributed signal and Fluke 9640/HP 33265B signal generators
	10 MHz to 4.0 GHz	5.5 parts in 10^9 Hz/Hz	
Frequency Measure	1 mHz to 1.3 GHz	6.0 parts in 10^{12} Hz/Hz + 2.4 μ Hz	GPS based 10 MHz distributed signal and Fluke 6680B counter
	(1.3 to 2.7) GHz	14 μ Hz	
	(3 to 26.5) GHz	110 parts in 10^{12} Hz/Hz	Spectrum analyzer
Comments	Calibration station for Fluke Frequency counters and Fluke 96XXX		

VII. Laser Power

Fiber Optic Laser Power Measuring Equipment			
Wavelength [λ]	Range	(\pm) CMC ^{2, 5, 11}	Comments
(635 to 650) nm	Absolute Power: (700 to 1000 μ W)	6.8 %	EXFO FPM-820 with FHM-8705 special
850 nm	Absolute Power: 100 μ W Linearity: (0 to -58) dBm	2.3 % 1.8 %	
1310 nm	Absolute Power: 100 μ W Linearity: (0 to -58) dBm	2.2 % 2.0 %	
Comments	Special calibration of Fluke Networks calibration station		

VIII. Dimensional Quantities

Inclination Angle Measuring Equipment		
Range	(\pm) CMC ^{2, 11}	Comments
(-75 to 75) °	$1.1 \times 10^{-3} \cdot \theta + 0.14$ °	Relative angle using a sine plate and gage blocks

IX. Optical Quantities

Solar Irradiance Measuring Equipment			
Solar Spectrum	Range	(\pm) CMC ^{2, 5, 11}	Comments
AM1.5 (ASTM G-173)	(0 to 1000) W/m ²	0.81 % + 0.67 W/m ²	Comparison to reference solar cell with a solar simulator

¹ This laboratory offers commercial calibration service.

² Calibration and Measurement Capability Uncertainty (CMC) is the smallest uncertainty of measurement that a laboratory can achieve within its scope of accreditation when performing more or less routine calibrations of nearly ideal measurement standards or nearly ideal measuring equipment. CMCs represent expanded uncertainties expressed at approximately the 95 % level of confidence, usually using a coverage factor of $k = 2$. The actual measurement uncertainty of a specific calibration performed by the laboratory may be greater than the CMC due to the behavior of the customer's device and to influences from the circumstances of the specific calibration.

³ Consensus Traceability based on extrapolation of measured values.

⁴ The uncertainties shown relate to voltages and frequencies that lie within $\pm 10\%$ of the specified values. For intermediate points between the discrete unit pairs, the uncertainty will be the greatest of the 4 adjacent unit pairs, plus 10 %.

⁵ In the statement of CMC, ratios such as percent or part-per-million values are of reading, unless otherwise indicated in the table.

⁶ The contributions from the “best existing device” are not included in the CMC claim for this parameter.

⁷ CMCs apply to negative equivalent pressure.

⁸ For intermediate Frequency points, the larger CMC from the adjacent Frequency points applies.

⁹ The laboratory does not offer commercial calibration service for this measurement parameter.

¹⁰ This scope meets A2LA’s *P112 Flexible Scope Policy*.

¹¹ The type of instrument or material being calibrated is defined by the parameter. This indicates the laboratory is capable of calibrating instruments that measure or generate the values in the ranges indicated for the listed measurement parameter.

¹² The uncertainties are applicable to the source amplitude measurement of the Fluke 96270A for the fundamental, specified harmonic frequencies and RF Reference Source using a dedicated measurement system. Uncertainties may also be reported for differences in level reported as Attenuation, the attenuation uncertainty will be the combined uncertainties of the reference level and the uncertainty of the final level.

¹³ The stated measured values are determined using the indicated instrument (see Comments). This capability is suitable for the calibration of the devices intended to measure or generate the measured value in the ranges indicated. CMC's are expressed as either a specific value that covers the full range or as a percent or fraction of the reading plus a fixed floor specification.

Accredited Laboratory

A2LA has accredited

FLUKE CORPORATION

Everett, WA

for technical competence in the field of

Calibration

This laboratory is accredited in accordance with the recognized International Standard ISO/IEC 17025:2017 General requirements for the competence of testing and calibration laboratories. This laboratory also meets the requirements of ANSI/NCSL Z540-1-1994 and R205 – Specific Requirements: Calibration Laboratory Accreditation Program. This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality management system (refer to joint ISO-ILAC-IAF Communiqué dated April 2017).

Presented this 16th day of June 2022.
